DISCLAIMER

ADP Computer Company Limited have taken all reasonable care in preparing these notes. However, nothing contained herein changes the Standard Terms and Conditions of the ADP Uniform Agreement for Hardware Sales, Software Licensing and Maintenance under which the product was acquired, nor increases ADP's customer liability. ADP, nor its subsidiaries, are liable for any incidental or consequential damage in connection with or arising from the use of the product. Further, ADP reserves the right to revise or make changes to the release notes from time to time without obligation to notify any persons or customers of such revisions or changes.

NOTICE TO USER

The release notes should not be construed as representing or inferring any guarantee or warranty with respect to the software named herein. Occasionally, changes or variations exist in the software that are not reflected in the release notes.

ADP Computer Company Limited, Cygnet Way, Charnham Park, Hungerford, RG17 0YL. (UK)

Introduction

These release notes are compiled to provide information about enhancements and features.

Note: The release notes are incremental and therefore only cover the changes and enhancements that have been programmed since the 8.35.9304 release.

Icons have been included to highlight the following:

Enhancements that may require further training.

Enhancements that require parameter, system utility or configuration changes.

System Requirements

Connection Manager, offering greater reliability and functionality over telnet, is the only recommended connection method for systems running KCML6.

Available memory should be 10 MB per user.

Windows 2000 and Windows XP are the recommended operating systems for PCs that run Kclient. Earlier Windows products unsupported by Microsoft are no longer endorsed as recommended platforms for KClient.

For optimal screen displays, we suggest screen resolution be set to 1024 x 768 on hardware that will support this.

- **KClient version used for KCC 9304A testing** - version 06.20.08.10168 - or newer
- **KCML upgrade used for KCC 9304A testing** - version 06.20.08.10168 - or newer
- Licence upgrade to include an Autoline Unrestricted licence
- To use **KCBT**, a KCBT viewer is required on all client PCs concerned.
- KClient setup file and KCML IMAGE files for all operating systems can be found on **http://www.kcml.com/kcml/06.20/**

Note: For systems using a non-standard back-up method that creates a token file in /tmp on completion of the back-up, administrators will need to be aware that the system now uses $WORKSPACE instead of /tmp. Please refer to your Technical Consultant to ensure that changes have been made to accommodate this.

> **Note**: New CRM and OCX integration with Outlook requires MS office XP (otherwise known as MS office 10 or MS office 2002)

Accounts

Nominal Ledger

Main Menu

Menu option	Form/Tab	Description
NL report writer	-	**1786 - E8 -** In the NL report writer, one can include/exclude some logic based on the value of a register. (register in this case being a command that performs certain functions). This enhancement allows such logic to be included for the Trial Balance formatting language. It allows the conditioning of something happening [i.e execution of a command] based on a register value.

Aftersales

Workshop Loading

Main Menu

Menu option	Form/Tab	Description
-	-	**1857 - E8 -** A new button has been added to the resource record in workshop loading called 'Picture'. The picture button opens the upload picture form to allow the user to transfer the technician's picture from their PC to the WL pictures gallery on the server.

Customer Relationship Management

Menu option	Form/Tab	Description
-	-	**1726 - R8 -** Re-introduction of field validation on user defined forms.
-	-	**1774 - E8 -** Enabling the tick within the service history tab will give vehicle information message in the Case Files when creating a POS WIP or creating a vehicle. Message "Return customer's parts".
-	-	**1777 - E8 -** New messages within the vehicle casefile: "Mileage exceeds Manufacturer's warranty maximum mileage" or "Mileage inside Manufacturer's warranty maximum mileage", displayed when the maximum mileage has been populated. also displays the last service or the last work miles.
-	-	**33385 - R8 -** Franchise data companies within MK vehicle record maintenance must comply with both standard permissions & security and company mapping. The vehicle franchise dropdown now honours company mapping and security permissions. **Note**: This qa breaks 9304B-17 & 9304A-25 - ref file handles panics in accounts and pos if the last tag for MK/libCM 9304B 1.2.5.514.2.147 & 9304A 1.2.2.346.2.302 Is not applied after upgrading to 9304B-17 or 9304A-25. (resolved by QA 76720 R8/33826)
-	CRM>My desktop>Load any customer>Additional Details	**33888 - R8 -** The tarcc line is not automatically updated by the system. Users will need to update the tarrc line manually.
